Hyporhetical protein At4g10590; T4F9.50 (At4g10590).
Name-At4g10590/T4F9.50;
Arabidopsis thaliana (Mouse-ear cress).
Bukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; eudicotyledons; core eudicotyledons; cosids; eurosids II; Brassicales; Brassicaceae; Arabidopsis.

Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
--- FUNCTION: Substrate-recognition component of the SCF (SKPI-CULI-F-box protein)-type E3 ubiquitin ligase complex (By similarity).
--- SUBUNIT: Directly interacts with SKP1A and CULI (By similarity).
--- SIMILARITY: Contains 1 F-box domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mus musculus (Mouse).

Nucleic Acids Res. 24:1322-1329(1996).
-!- FUNCTION: Binds to the UKS1 site (5'-AGCCGCCGA-3') and negatively regulates the expression of many genes including CAR1 (arginase), several required for sporulation, mating type switching, inositol metabolism, and oxidative carbon metabolism. Has both a positive and negative role in regulating phospholipid biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PROSITE; PS00463; ZN2 CY6 FUNGAL 1; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2, Application US/08940391
Patent No. 5965373
GENERAL INFORMATION:
APPLICANT: Zimmermann, Rainer; Park, John E.;
APPLICANT: Rettig, Wolfgang; Old, Lloyd J.
TITLE OF INVENTION: ISOLATED DIMERIC FIBROBLAST ACT
TITLE OF INVENTION: PROTEIN ALPHA, AND USES THEREOF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ZIE: 10022

Patent No. 5767242
GENERAL INFORMATION:
APPLICANT: Zimmermann, Rainer; Park, John E.;
APPLICANT: Rettig, Wolfgang; Old, Lloyd J.
TITLE OF INVENTION: ISOLATED DIMERIC FIBROBLAST ACTIVATION PROTEIN
TITLE OF INVENTION: ALPHA, AND USES THEREOF
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSEE: Felfe & Lynch
                                                                                                              GENERAL INFORMATION:
APPLICANT: Rettig, Wolfgang J.; Scanlan, Matthew J.;
APPLICANT: Garin-Chesa, Filar; Old, Lloyd J.
TITLE OF INVENTION: ISOLATED NUCLEIC ACID MOLECULE CODING FOR TITLE OF INVENTION: FIRROBLIST ACTIVATION PROTEIN AND USES TITLE OF INVENTION: THEREOF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 760;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IndelB

Sequence 3063, Application US/09248796A

Sequence 3063, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANS.

TITLE OF INVENTION: NUMBER: US/09/248,796A

CURRENT PILING DATE: 1999-02-13

PRIOR PELLING DATE: 1998-02-13

PRIOR PELLING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

NUMBER PO SEQ ID NOS: 28208

SEQ ID NO 23053

LENGTH: 327
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NAME/KEY: UNSURE

1 LOCATION: (2),(3),(21)

2 OTHER INFORMATION: Identity of amino acid sequences at the above locations are unknow
